SUMMARY

I am a results-driven Software Engineer with over 3 years of professional experience building robust, scalable web and mobile applications. My expertise lies in architecting end-to-end systems that bridge the gap between complex back-end logic and high-performance user interfaces.

WORK EXPERIENCE

Software Engineer, Archangel Digital Studios Singapore **October 2025 - Present**

- Full-Stack Engineering: Expert in developing end-to-end applications using Next.js, React, and PostgreSQL, with a focus on seamless system integration and robust API structures.
- Cross-Platform Mobile Development: Proven track record in building and maintaining high-performance mobile apps using Flutter (BLOC & GetX), ensuring a native-like experience across iOS and Android.
- Advanced Platform Integration: Specialized in extending the capabilities of Shopify (Liquid) and Wix Studio (Velo) through custom-coded solutions, delivering enterprise-grade functionality with rapid time-to-market.
- System Architecture: Experienced in engineering complex software ecosystems, including multi-store retail systems, WMS, and POS components.
- Linux & Infrastructure: Power user of Linux environments, leveraging headless CLI tools and kernel-level performance tuning to ensure highly efficient development and production workflows.

Full Stack Developer, PT Stars Global Resources Indonesia **August - October 2025**

- Developed an automated payroll system for the mining industry, enhancing operational efficiency 30%.
- Integrated facial recognition attendance tracking to streamline employee management processes. Created RESTful APIs for comprehensive reporting, improving data accessibility and decision-making.
- Contributed to PT Stars Global Resources Indonesia, a dynamic company in Jakarta, Indonesia, focused on innovative solutions.

Mobile Developer, PT Anyar Retail Indoensia **May 2022 - August 2025**

- Developed and Lead project high-performance mobile applications using Flutter, enhancing user engagement.
- Collaborated with cross-functional teams to define app requirements and ensure seamless API integrations.
- Implemented responsive designs, optimizing user experiences across various devices and screen sizes.
- Stayed updated with mobile development trends, incorporating innovative features to improve app functionality.

Full Stack Developer, PT HS Budiman (Internship)

July - December 2020

- Developed an warehouse management system dan courier management system.
- Help to integrate API to Mobile Apps (E-Ticketing)
- Help to create new standard operational
- Create a document Functional Specification Document.
- Create a document report for final project in university.

Mobile Developer, PT Media Baru Digital (Internship)

July - December 2019

- Developed and mobile applications using Kotlin, enhancing user engagement.
- Collaborated with cross-functional teams to define app requirements and ensure seamless API integrations.
- Implemented responsive designs, optimizing user experiences across various devices and screen sizes.

EDUCATION

Universitas 17 Agustus 1945 Surabaya

Bachelor Degree of Informatics Engineering

- Final Project developed warehouse management system and courier management system.
- Achieved to get a final score of 3.31 out of 4.0.

ADDITIONAL INFORMATION

- **Programming Skills:** React JS, Next JS, Flutter, Kotlin, Swift, Java, Python.
- **Database Skills:** PostgreSQL, MySQL.
- **Third Party:** Firebase, Shopify, Wix Studio, WordPress, Vercel, Google Cloud.
- **Tools & Management :** Git, Notion, Trello, Jira, Figma.
- **Languages:** English, Indonesian.
